

ANJALI PANDE

Worli, Mumbai | India

+91 8878326289 anjalipande2003@gmail.com LinkedIn

Career Summary

SDE-1 at **Dream11** building and owning backend infrastructure and auth systems at scale. **IIT Delhi** graduate with deep hands-on experience in **distributed systems**, **cloud-native infrastructure** and **multi-tenant platform engineering** across **Java**, **Spring Boot**, **AWS** and **Terraform**. Drives end-to-end delivery from infra provisioning and **CI/CD pipelines** to secure **auth systems**, also open-source platform migration in a fast-paced product environment

Work Experience

Dream11

Mumbai, India

Software Development Engineer-1

Jul 2025 – Present

User Tenant Management: Multi-tenant authentication, authorization and tenant lifecycle

- Architected **Multi-Tenant Auth Platform** with **RBAC**, **RS256 JWT** signing, **JWKS** discovery and token revocation
- Built **Async Tenant Onboarding Pipeline** with **state machine lifecycle management** and **ShedLock** based **distributed scheduling** and configurable retries, enabling resilient multi-system provisioning
- Delivered **zero-downtime credential rotation** with configurable **grace periods**, shipped reusable **Auth SDK** that standardized auth integration across all internal services

Infrastructure & Platform Engineering: Stage & production setup across 13 microservices

- Provisioned **stage** and **prod infra** for **13 microservices on ECS Fargate** using reusable **Terraform modules** across isolated AWS accounts, managing **~182 resources** including ECS, ECR, ALB, IAM, and Secrets Manager
- Built **GitHub Actions CI/CD** with **OIDC federation** for services, eliminating long-lived AWS credentials, stage deploys on PR merge, prod via **immutable commit-SHA ECR images**, ensuring environment parity
- Deployed **GoAlert** on **ECS Fargate** and built a **Python Lambda bridge** routing **38 CloudWatch alarms** with per-service on-call routing, **SQS DLQ** for zero silent alert loss and escalation policies to minimize **MTTR**
- Reduced stage infra costs by **~60%** via **scheduled ECS scale-to-zero** and **weekend infra toggles** across all ECS services, RDS instances and bastion host

Jio

Mumbai, India

Research Analyst

Jun 2024 – Jul 2024

- Researched **5G**, **IoT**, **cloud computing** & big data technologies, identifying **40+** impactful North American use cases
- Conducted **Industrial 5G analysis**, enabling business to leverage its potential for digital transformation in **Industry 4.0**
- Surveyed **digital twin**, networks and telecom automation trends, findings contributed to internal technology assessment

Technical Skills

Languages & Frameworks: Java, Python, C++, SQL | Spring Boot, REST APIs, JPA/Hibernate

Cloud & Infra: AWS (ECS Fargate, ECR, ALB, IAM, SQS, Secrets Manager), Terraform | Docker, ShedLock

DevOps & Messaging: GitHub Actions (OIDC), GoAlert, Kafka | PostgreSQL, MySQL, Redis

AI & Tools: OpenAI API, Pathway (RAG) | VS Code, IntelliJ

Projects

UPSC-LLM RAG Q&A Application | *Self Project*

Apr 2025 – May 2025

- Built **RAG application** for current affair queries using **Pathway**, enabling real-time data ingestion from multiple sources
- Containerized with **Docker**, exposed document querying and summarization via **OpenAI-backed REST API** endpoints
- Eliminated **ETL pipelines** entirely reduced deployment complexity by **~60%** and improved query and response precision

Search Nearby Restaurant | *Prof. Ashish Chiplunkar, CS Dept., IITD*

Oct 2024 – Nov 2024

- Developed program similar to Google Maps to retrieve restaurants within **Chebyshev distance** from a given query point
- Constructed **orthogonal range tree** with pre-computation time of $O(n \log n)$ to store points of x-y plane [n : data points]
- Returned required restaurant points in $O(m + (\log n)^2)$ time, catering to location-based applications [m : return points]

Education

Indian Institute of Technology Delhi

Nov 2021 – May 2025

Bachelor of Technology in Electrical Engineering (CGPA of 6.57/10)

New Delhi, India
